PROTECTION TECHNOLOGY

D3O® Protected

LITE HELMET

Mips

PROTECTION TECHNOLOGY

Mips

10-15mm

Mips® technologies

For rotational impact

The Mips® safety system features a low-friction layer inside a motocross helmet that allows a multi-directional movement of 10-15mm on certain angled impacts, intended to help reduce rotational force to the head.

Mips® technologies weigh between 25-45 grams, not much more than the weight of a typical energy bar.

1.

Traditional helmets are designed and tested for straight impacts, but most impacts are oblique, which can cause rotational motion in the head.

2.

Rotational movement can lead to brain damage.

3.

The low friction layer is designed to reduce rotational movement transmitted to the head during certain oblique impacts.
